CAT. No. 19ULTGSRBC

# The new generation of high-performance bearings from NTN.

# The Better Option

Less downtime.  
More profitability.

Combining premium-grade materials, optimized design and precision manufacturing, ULTAGE is the new generation of high-performance bearings from NTN that delivers unmatched service life, the highest limiting speeds and the best load capacities on the market to maximize the productivity of your equipment.

## Product Features & Benefits

- 1** Made from premium-grade steel and larger rollers, ULTAGE SRBs provide a 65% increase in capacity compared to a conventional bearing, resulting in up to 5 times longer service life.
- 2** Optimized surface finish and high-performance, window-type pressed steel cage without the center guide ring provide higher rigidity, stability, and better lubrication flow through the bearing, allowing for a 20% higher limiting speeds compared to conventional designs and reducing operating temperatures.
- 3** Our special heat treatment process allows for dimensional stability of the bearing up to 200°C (392°F) all while maintaining high hardness.

# ULTAGE Spherical Roller Bearing Nomenclature System

Series	Size	Bore Diameter	Internal Design	Cage Type	Ring Modification	Clearance
22	2	24	E	A	K W33	C3

## 1. Series & Size

22200:	Spherical roller
22300:	Spherical roller
23000:	Spherical roller
23100:	Spherical roller
23200:	Spherical roller, wide
23900:	Spherical roller
24000:	Spherical roller, wide
24100:	Spherical roller, wide

## 2. Internal Design

E:	High-capacity spherical roller bearing
EF800:	Shaker screen specification, special tolerance and C4 clearance

## 3. Cage

A:	Pressed-steel cage
M:	Machined-brass cage

## 4. Ring Modification

Blank:	Cylindrical Bore
K:	1:12 Tapered Bore
K30:	1:30 Tapered Bore
W33:	Oil groove and holes Outer ring

## 5. Clearance

C1:	Radial clearance less than C2
C2:	Radial clearance less than normal
No Suffix:	Normal radial clearance
C3:	Radial clearance greater than normal
C4:	Radial clearance greater than C3
C5:	Radial clearance greater than c4

# ULTAGE®

## The ULTAGE Advantage

Combining premium-grade materials, optimized design and precision manufacturing, ULTAGE is the new generation of high-performance bearings from NTN that delivers unmatched service life, the highest limiting speeds and the best load capacities on the market to maximize the productivity of your equipment.

Encompassing a wide variety of key bearing types such as spherical roller, cylindrical roller, tapered roller, heavy-duty mounted roller, angular contact and radial ball bearings, the ULTAGE line of superior, high-performance bearings from NTN delivers:

- **Extended service life** for better return on our end-users' investment.
- **Greater performance**, longer production and less downtime.
- **Dependable product availability**, thanks to a wide, robust distribution network.
- **Extras that go beyond a standard offering**, including on-site and web-based technical training, installation support, digital resources and more.

# Applications

Because no two applications are identical, NTN develops solutions suited to your specific needs in order to satisfy your requirements. Equipped with the latest technological advances, our ULTAGE spherical roller bearings help to make your processes more efficient and more profitable.

## Paper & Forestry

The papermaking environment is particularly harsh for bearings:

- Presence of water and water vapour, with the risk of corrosion
- High loads and speeds
- Need for precision rotation
- High temperatures
- Aggressive chemical products (in particular during bleaching)
- High dust levels
- Criticality of precise and reliable lubrication at each point

ULTAGE spherical roller bearings are your ideal technical solution. Equipped with their seals, they offer excellent protection against external pollution, thereby contributing to operational reliability and extended service life.

## Mining

In the sector that incorporates mining, the processing of ore and the cement industry, bearings operate in an environment that is mechanically very testing:

- Combined loads
- Pollution
- Impacts, imbalances and vibrations
- High temperatures (+100°C)
- High rotation speeds
- Alignment faults

The spherical roller bearings of the EF800 series have been specifically designed to withstand extreme conditions of vibrations, impacts and imbalances. NTN continues to make a solid contribution to improving machine reliability, security and environmental protection.

## Metals Manufacturing

The conditions that bearings have to endure are variable, depending on the stage of a given process, but are always very demanding:

- High temperatures leading to expansion and alignment faults
- Very high pressures / heavy loads
- High levels of pollution
- Humidity, steam
- Vibrations, impacts

The spherical roller bearings are perfectly suited to these demanding conditions, through associating the choice of steels of extreme purity with good stability at high temperatures, high load capacities, and resistance to wear and tear.

## Transmissions

Reducers and transmission lines are key elements for all types of industries. This applies for all types of industrial processes, such as mining or the cement industry, the steel industry, dockside cranes and movable bridges.

As a manufacturer, you want to increase the performance of your speed reducers as well as minimizing your own overheads and those of your customers. Our objective is to work with you in order to reduce the torque or the size, double the service life and improve the energy yield.

## Wind Energy

In the wind power sector, reliability allied with simplicity of assembly and maintenance, along with ROI, are some of the main requirements of customers. Indeed, the guarantee of profitable wind power production necessitates the reliable, efficient operation of the chosen solutions.

NTN therefore works with the designers of wind turbines and transmission mechanisms in order to develop the products that meet the requirements of the industry.

In this context, spherical roller bearings offer the ideal response in terms of performance, reliability, reduced maintenance costs, and so on.

## High-Vibration Applications

The vibratory mechanisms such as those found in shaker screens, crushers, grinders constitute some of the most demanding applications for bearings. NTN has therefore developed a range of spherical roller bearings specifically designed to meet these critical requirements.

These bearings are:

- Available in the 223xx series with a cylindrical or tapered bore,
- Available with bore diameters of between 40mm and 170mm,
- Available on request for the other series and bore dimensions.
- Manufactured according to specification EF800 which sets out the special tolerances and radial clearance of spherical roller bearings.

High vibration machinery (shaker screens, crushers, grinders, etc.) subject bearings to high levels of stress: heavy loads, radial acceleration, centrifugal forces, a highly polluted environment, etc. All this imposes specific resistance characteristics on the spherical roller bearings.

The high radial accelerations of these applications place a particular strain on the cage. The EF800 series, equipped with solid cages with a contoured profile around the cage pockets, guarantees the stability of the rolling elements in order to limit heat build-up. The capacity of the copper alloy to resist impacts makes the unit capable of withstanding the most testing of operating conditions.

**For additional information about the use of ULTAGE spherical roller bearings in your application, please contact your NTN Sales Representative.**

• **Allowable Speed** - Speed based on specific lubricating condition where the value is based on the outer ring reaching 80°C (176°F) based on specific loading and lubrication amount. For more information, please contact NTN engineering.  
 • **Reference Speed** - Speed at which thermal balance is reached between the heat generated by friction and the heat dissipated through shaft. ISO 15312. Further calculation need to determine speeds for use in oil or grease.  
 • **Limit Speed** - Maximum allowed speed which depends on the mechanical limits of the bearing components.

- **Allowable Speed** - Speed based on specific lubricating condition where the value is based on the outer ring reaching 80°C (176°F) based on specific loading and lubrication amount. For more information, please contact NTN engineering.
- **Reference Speed** - Speed at which thermal balance is reached between the heat generated by friction and the heat dissipated through shaft. ISO 15312. Further calculation need to determine speeds for use in oil or grease.
- **Limit Speed** - Maximum allowed speed which depends on the mechanical limits of the bearing components.

TYPE EA - TYPE EM

• **Allowable Speed** - Speed based on specific lubricating condition where the value is based on the outer ring reaching 80°C (176°F) based on specific loading and lubrication amount. For more information, please contact NTN engineering.  
 • **Reference Speed** - Speed at which thermal balance is reached between the heat generated by friction and the heat dissipated through shaft. ISO 15312. Further calculation need to determine speeds for use in oil or grease.  
 • **Limit Speed** - Maximum allowed speed which depends on the mechanical limits of the bearing components.

TYPE EA - TYPE EM

Dynamic equivalent radial load

$$P_r = XF_r + YF_a$$

$\frac{F_a}{F_r} \leq e$		$\frac{F_a}{F_r} > e$	
X	Y	X	Y
1	$Y_1$	0.67	$Y_2$

Static equivalent radial load

$$P_{or} = F_r + Y_0 F_a$$

For values  $e, Y_1, Y_2$  and  $Y_0$  see the following table.

	Bearing Number		Abutment and Fillet Dimensions					Constant	Axial Load Factors			Approx. Mass (kg)	
	Cylindrical Bore	Tapered Bore	$d_i$	$d_{a \min}$	$D_{a \max}$	$D_i$	$r_{as \max}$		e	$Y_1$	$Y_2$	$Y_0$	Cylindrical Bore

• **Allowable Speed** - Speed based on specific lubricating condition where the value is based on the outer ring reaching 80°C (176°F) based on specific loading and lubrication amount. For more information, please contact NTN engineering.  
 • **Reference Speed** - Speed at which thermal balance is reached between the heat generated by friction and the heat dissipated through shaft. ISO 15312. Further calculation need to determine speeds for use in oil or grease.  
 • **Limit Speed** - Maximum allowed speed which depends on the mechanical limits of the bearing components.

TYPE EA - TYPE EM

• **Allowable Speed** - Speed based on specific lubricating condition where the value is based on the outer ring reaching 80°C (176°F) based on specific loading and lubrication amount. For more information, please contact NTN engineering.  
 • **Reference Speed** - Speed at which thermal balance is reached between the heat generated by friction and the heat dissipated through shaft. ISO 15312. Further calculation need to determine speeds for use in oil or grease.  
 • **Limit Speed** - Maximum allowed speed which depends on the mechanical limits of the bearing components.

# Bearing Fits

TOLERANCE CLASS OF NORMALLY USED SHAFT					
Conditions	Shaft Diameter (mm)		Tolerance Zone of Shaft	Remarks	
	Over	Including			
<b>Cylindrical Bore Bearing (Class 0)</b>					
Rotating Inner Ring Load or Indefinite Direction Load	Light Load <sup>1)</sup> or Normal Load <sup>1)</sup> or Varying Load	18	25	k5	
		25	40	m5	
		40	60	n5	
		60	100	n6	
		100	200	p6	
		200	500	r6	
	Heavy Load <sup>1)</sup> or Impact Load	50	70	n5	
		70	140	p6	
		140	200 <sup>2)</sup>	r6	
Static Inner Ring Load	Inner Ring Should Slide Smoothly on Shaft	All Shaft Diameters		g6	For larger bearings, tolerance zone f6 may be applied to ensure the bearing slides smoothly on the shaft.
	Inner Ring Need Not Slide Smoothly on Shaft	All Shaft Diameters		h6	
<b>Tapered Bore Bearing (Class 0; Complete with Adaptor or Removable Sleeve)</b>					
All Types of Loads	All Shaft Diameters		h9/IT5 <sup>3)</sup>	h10/IT7 <sup>3)</sup> will suffice for power transmitting shafts.	

- Criteria for light loads, normal loads, and heavy loads.
  - Light loads: Dynamic equivalent radial loads  $\leq 0.05C_r$
  - Normal loads:  $0.05C_r < \text{Dynamic equivalent radial loads} \leq 0.10C_r$
  - Heavy loads:  $0.10C_r < \text{Dynamic equivalent radial loads}$
- When using shaft diameter over 200mm with heavy load or impact load, please contact NTN Engineering.
- "IT5" or "IT7" means that the shaft form tolerance (circularity, cylidricity, etc.) must satisfy tolerance class IT5 or IT7.

Note 1: The above tables applies to solid steel shafts.

2: When calculating the necessary interference, use the following expressions. Determine the value to 1/1000 the shaft diameter maximum:

- When  $Fr \leq 0.3 C_{0r}$  Necessary interference  $\Delta_{dF}$  ( $\mu\text{m}$ ) is  $\Delta_{dF} = 0.08(d \cdot F_r / B)^{1/2}$
- When  $Fr > 0.3 C_{0r}$   $\Delta_{dF} = 0.02(F_r / B)$   
 (where, d: bearing bore diameter mm, B: inner ring width mm,  $F_r$ : radial load N,  $C_{0r}$ : basic static load rating N)

When taking into account the difference between the ambient temperature and the temperature of the running bearing, consider adopting the necessary temperature-difference dependent effective interference  $\Delta_{dT}$  ( $\mu\text{m}$ ).

(where,  $\Delta T$ : difference between bearing temperature and ambient temperature in °C)

TOLERANCE CLASS OF NORMALLY USED HOUSING BORE					
Housing	Conditions			Tolerance Class of Housing Bore	Remarks
	Load Type, etc.	Axial Movement of Outer Ring			
One-piece Housing or Two-piece Housing	Static Outer Ring Load	All Types of Loads	Movable	H7	When a large bearing is used or a large temperature difference exists across the outer ring and housing, tolerance zone G7 may be applied.
		Light Load <sup>1)</sup> or Normal Load <sup>1)</sup>	Movable	H8	-
		Shaft and Inner Ring Become Very Hot	Easily Movable	G7	When a large bearing is used or a large temperature difference exists across the outer ring and housing, tolerance zone F7 may be applied.
One-Piece Housing	Static Outer Ring Load	Precision Rotation Must Be Possible Under Light or Normal Load	Generally Immovable	K6	-
			Movable	JS6	-
		Quiet Running Required	Movable	H6	-
	Indefinite Direction Load	Light or Normal Load	Movable	JS7	-
		Normal or Heavy Load <sup>1)</sup>	Generally Immovable	K7	-
		High-Impact Load	Immovable	M7	-
	Rotating Outer Ring Load	Light or Varying Load	Immovable	M7	-
		Normal or Heavy Load	Immovable	N7	-
		Heavy or High-Impact Loads on Thin-Walled Housings	Immovable	P7	-

1. Criteria for light loads, normal loads, and heavy loads.
- Light loads: Dynamic equivalent radial loads  $\leq 0.05C_r$
  - Normal loads:  $0.05C_r < \text{Dynamic equivalent radial loads} \leq 0.10C_r$
  - Heavy loads:  $0.10C_r < \text{Dynamic equivalent radial loads}$

Note: The above tables applies to steel or cast iron shafts.

## Allowable Axial Load

Spherical roller bearings carry a radial load, a bidirectional axial load, or a combination of both. They are suitable for applications involving vibration and impact loads. However, if a spherical roller bearing is used under an excessive axial load, the load on the rollers of the row not receiving the axial load will be reduced and the rollers in this row move with a sliding motion, possibly leading to lubrication failure and other problems. In case the ratio of axial load to radial load exceeds Constant  $e$  which is in the dimension table ( $F_a/F_r > e$ ), please contact NTN Engineering.

$F_a$ : Axial Load

$F_r$ : Radial Load

$e$ : Constant (See dimensional table)

Since 1918, NTN has been a trusted OE manufacturer of high-performing bearing products that increase companies' productivity and efficiency.

- NTN has been the world's broad-line bearing manufacturer for nearly 100 years.
- NTN has the largest bearing manufacturing footprint in the United States.
- NTN is the largest supplier of American-made products to the construction and mining industries.
- NTN is a major supplier to over two-thirds of the world's "Fortune 500" manufacturing companies.
- More cars worldwide ride on NTN bearings and drivetrains than any other manufacturer's product.

◀ NTN was the first bearing manufacturer to be awarded the prestigious Deming Prize for recognition of its quality products and systems.

# Beyond Bearings

Training. Installation Support.  
Trouble-shooting. And more.

When you choose NTN, your team is equipped with all the necessary tools and resources to get the job done right. From installation to problem-solving, we'll be there with the hands-on support you need to take on your toughest challenges. This includes extra services such as:

## Technical Training Unit

On-site, mobile training unit offering specialized, hands-on instruction from NTN engineers

## Product Training School

Three days of in-depth instruction from NTN engineers at NTN headquarters  
([go.ntnamericas.com/trainingschool](http://go.ntnamericas.com/trainingschool))

## eKnowledge

WEB-BASED TRAINING PROGRAM

Six online product training modules covering different bearing types and nomenclature  
([www.ntnamericas.com/eknowledge](http://www.ntnamericas.com/eknowledge))

## NTN Bearing Finder

Customizable search tool featuring exhaustive data sets, comprehensive part interchanges and interactive CAD drawings  
([bearingfinder.ntnamericas.com](http://bearingfinder.ntnamericas.com))

Ready to get rolling? Contact us today for full details at  
1-800-323-2358 or [eng@ntnamerica.com](mailto:eng@ntnamerica.com).
